                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 preparatory steps in conjunction with mass spectroscopy and time-of-flight detection procedures to maximise the diversity of biopolymers which are verifiable within a particular sample. The cohort of biopolymers verified within such a sample is then viewed with reference to their ability to evidence at least one particular disease state, thereby enabling a diagnostician to gain the ability to characterise either the presence or absence of a disease state relative to recognition of the presence and/or absence of the biopolymer. Diagnostic assay kits including the present biopolymer marker are claimed, and a process for regulating a disease state by controlling the presence or absence of the biopolymer marker is
                                                                                                                                                                                                                                                                           31-OCT-2002.
                                                                                                                                                                                                                                                                                                                                                        Biopolymer; disease state; congestive heart failure; asymptomatic; diabetes; kidney failure; heart failure; Syndrome X; heart attack; stroke; C3f; complement system.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        patients before they suffer an irreversible event such as diabetes, kidney failure and heart failure, and enable effective disease management and preventative medicine. Additionally, the specific diagnostic tests which evolve using the biopolymer provide a tool for rapidly and accurately diagnosing acute Syndrome X such as heart attack and stroke, and facilitate treatment. The sequence Presented is the congestive heart failure specific C3f fragment from the complement system, which has a molecular weight of about 1793 Daltons, marker bioploymer.
                                                   least one particular disease state. (I) is useful for indicating a disease state, in particular type II diabetes. The marker sequences are useful as antigens in immunoassays for the detection of those individual suffering from the disease known to be evidenced by the marker sequence. (I) provides an efficient diagnostic tool for rapidly and accurately diagnosing disease states such as type II diabetes. This is the amino acid sequence of a biopolymer marker.
                                                                                                                                                                                                                                                                                                                                                                                                                   Biopolymer marker useful in indicating disease state, in particular type II diabetes and as antigens in immunoassays for detecting individuals suffering from disease known to be evidenced by marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention discloses a biopolymer marker which is useful in indicate at least one particular disease state, particularly congestive heart failure. The polymer marker is also useful for characterising disease states. The polymer marker allows physicians to identify asymptomatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disease specific biopolymer marker #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                   The invention describes a biopolymer marker (I) useful in indicating

The marker is characterised as a C3f fragment from the complement system having a molecular weight of about 2056 daltons. The biopolymer marker identified is useful for evidencing, categorizing or regulating at least one disease state, preferably congestive heart failure.
Biopolymer marker; type II diabetes; immunoassay.

                                                                                                                                        Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a biopolymer marker (I) useful in indicating at least one particular disease state. (I) is useful for indicating a disease state, in particular type II diabetes. The marker sequences are useful as antigens in immunoassays for the detection of those individual suffering from the disease known to be evidenced by the marker sequence. (I) provides an efficient diagnostic tool for rapidly and accurately diagnosing disease states such as type II diabetes. This is the

CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations constituted because of the traits to assess biodiversity and to produce other types of data and products dependent on DNA and canno acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO control of the control of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

CC forms a down-regulation resistant C3 convertase. (A), their variants, contemporary regulation resistant C3 convertase. (A), their variants, cC fragments and conjugates are used to deplete levels of complement CC parthway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a C virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment of the alternational anaphylactic peptides CC and other inflammatory mediators) or killing of leukaemia cells or CC minibited by factor I, it can bind repeatedly to factor B (which is then CC consumption of factor B.

Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       19-NOV-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of components pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modified complement pathway protein that forms C3 convertage resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft
                                                                    Human C3 protein
                                                                                                       09-APR-1998

This protein is a protein of the C1 invention, and is a modified mative complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A) their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction CC in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to CC complement-mediated responses, a particular application is eliminating CC complement-mediated responses, a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides cand other inflammatory mediators) or killing of leukaemia cells or care containing (A) (this may remove additional anaphylactic peptides cand other inflammatory mediators) or killing of leukaemia cells or (A) is not contained to the contained of the contained cells or care can be contained to the contained to the contained cells or care can be contained to the contained to the contained cells or care can be contained to the contained t

                                                                                                                                                                                                                                                       This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the cinvention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement cC pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC (particularly a xenograft) but also to prevent complement-mediated CC (particularly a xenograft) but also to prevent complement-mediated CC (complement protein conversion and deposition at a specific site (e.g. a Crimal of the conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application; a climinating CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or CC MHC-mismatched lymphoytes in extracted bone marrow. Since (A) is not cinabilited by factor I, it can bind repeatedly to factor B (which is then can consumption of factor B.
                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                     Human C3 protein (AAR94028) was produced by expression of a cDNA sequence (AAT17738) isolated from a human liver cDNA library. C3 is a complement pathway protein that is complement to cleavage by Factor I and is also susceptible to the inhibitory action of Factor H. Mutants of C3 (AAR94029 and AAR94030) have been produced by site-directed mutagenesis. These mutants can be
                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                   used to super-active the complement system, or to induce localised super-activation at a specific target to increase the target's sensitivity to complement-mediated destruction
                                                                                                                                                                                                                                                                                                                                   Disclosure; Fig 1; 81pp; English.

It is obtained by site-directed mutagenesis of C3-encoding cDNA (AAT17738). The modification results in improved resistance to cleavage by Factor I in comparison to wild-type C3. This allows the modified C3 to be used therapeutically to
                                                                                                                                                                                                                                                                                                                                                                             Mutant complement pathway protein forming stable C3 convertase for generalised complement depletion or localised complement activation
Human modified C3 (D752G, E753S, D754G).

It is obtained by site-directed mutagenesis of C3-encoding cDNA (AAR17738). The modification reduces the interaction of C3b/C3i with Factor H in comparison to wild-type C3. This allows the modified C3 to be used therapeutically to super-active the complement system or the increase a target's (e.g. tumour, pathogen or virus-infected cell) sensitivity to complement-mediated destruction.

(c) (see AN34606 for wild type protein). This protein is a protein of the convention, and is a modified native complement pathway protein (A) that CG forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC exhausted), specifically to prevent conjugates of complement CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement cells left after surgical removal of a tumour). Also CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated by factor mediators) or killing of leukaemia cells or CC contemplated by factor I, it can bind repeatedly to factor B (which is then CC inactivated), causing inactivation of the alternative pathway by consumption of factor B.

CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating CC complement-mediated responses; a particular application is eliminating CC any cancer cells left after surgical removal of a tumour). Also CC contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides CC and other inflammatory mediators) or killing of leukaemia cells or CC matrismatched lymphocytes in extracted bone marrow. Since (A) is not containing the factor I, it can bind repeatedly to factor B (which is then contactivated), causing inactivation of the alternative pathway by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; C3 protein; convertase; complement pathway protein; infection; down-regulation resistant C3 convertase; xenograft rejection; therapy; complement-mediated disease; autoimmune disease; leuklaemia cell; tumour; complement-mediated response; MHC-mismatched lymphocyte; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 1997-457534/42

pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or wife-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19-NOV-1996;

This sequence represents a mutated human C3 protein of the invention (see ANW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more complement (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a tumour).
